

Check the seed dishes daily, removing any empty husks, and refill as necessary. Both the food and water pots will need washing regularly.

Millet seed can be given as a treat as can honey bells and seed bars. Fresh thoroughly washed green-food may be given, such as chick-weed, lettuce, watercress and seeding grass, but be very careful not to over feed. Orange Marigold heads in the summer can be eaten too.

Your bird will also require a good supply of mineralised or oyster shell grit, which helps them to digest their food. Cuttlefish bones could be supplied too as it is a source of calcium and helps to keep the beak worn down and maintain strong bones.

Bird specific vitamin supplements are available and may be added to the drinking water or mixed with fruit or vegetables.

Fresh water should always be available.

### SHOPPING LIST

- Cage and cage stand
- Cage cover
- Water pot
- Seed pot and guard
- Perches
- Bath
- Food
- Toys
- Sand/sand sheets
- Grit, Cuttlefish or mineral block
- Pet-safe disinfectant
- Book on Canary care

The Animal Welfare Act 2006 means all pet owners have a legal duty of care to their pets. Anyone who is cruel to an animal or is found not to be providing the five animal welfare needs, as listed below, can be fined and sent to prison.

#### The Five Animal Welfare needs:

1. **Environment:** Pets should be given the correct housing according to its size, this includes shelter, space to exercise and a secure, comfortable place to rest.
2. **Diet:** Pets should be offered the correct type and volume of food to cover all their nutritional needs alongside access to clean, fresh water.
3. **Behaviour:** All pets should be allowed to exhibit normal behaviour patterns and should be provided with the facilities to do so.
4. **Company:** Some animals require the company of their own kind, whilst others should be kept on their own.
5. **Health:** All animals should be protected from pain, suffering, injury and disease, and given veterinary treatment if they become sick or injured.

#### Remember – you should never release your pet into the wild.

# GUIDE TO CARING FOR CANARIES

the  
**pet**  
**charity**  
*For joy, health & companionship*

Canaries originate from the Canary Islands and there are many popular varieties in the UK, such as Borders, Fifes, Glosters, Rollers, Norwich, Lizard and Red Factors.

# THE PET CHARITY GUIDE TO CARING FOR CANARIES

Colours range from yellow, green, brown, variegated and red to various pastel shades.

Hens may twitter but cocks really sing. There is no easy way to sex canaries so seek advice from your pet shop. Changes in the environment can affect singing. The singing normally returns once settled into their new home.

If your canaries go into moult in their new home resumption of song can take six weeks or more. Properly cared for your canary will live on average for 10 years.

## GENERAL CARE

Properly cared for your canary will live a long and happy life.

**Moult:** This is a natural occurrence where the bird changes its feathers and is usually problem-free. The process can take several weeks and the bird will become quieter and spend more time resting. An abnormal moult can be caused by sudden shock or fright, disease or extremes of temperature.

**Feathers:** Feathers should not be allowed to become too dry. You can use a suitable fine mist spray together with a special solution to spray on, your pet shop can advise you on suitable products. Some canaries do enjoy a bath, but not all of them.

**Colds:** The bird will be listless, with feathers fluffed up and wheezing if it catches a cold. Keep him warm, do not bath and consult with your vet immediately.

**Diarrhoea:** This is commonly caused by an excess of green, mouldy or contaminated food, a change in diet or lack of fresh water. Keep him warm, make sure he has plenty of fresh water and consult your vet.

**Mites:** This is a parasite that feeds on birds' blood causing itching, weight loss and feather loss. Mites are easy to destroy with a suitable spray and your pet shop or vet will advise.

## DID YOU KNOW?

Properly cared for your canary will live on average for 10 years.

**Toenails:** Overgrown claws need to be clipped. If left they will endanger the bird by becoming caught in the cage wire. Care must be taken when cutting nails to avoid cutting the blood vessels and nerves. Consult your vet or pet shop.

## CHOOSING YOUR CANARY

A healthy canary should be:

- ❑ Bright and alert
- ❑ Have no signs of discharge from the eyes or nostrils
- ❑ Have a clean vent area
- ❑ Feathers should be flush to the body and not be fluffed up
- ❑ Should have no signs of breathing problems
- ❑ Movement should be fluent with no signs of lethargy

## HOUSING

A single caged bird will require a lot of attention and stimulus if it is not to become bored and frustrated. If the bird is to be left on its own for long periods it is better to give it a companion.

Canaries can be housed in a cage or in an aviary. A roomy cage is advisable and should be large enough for your canaries to stretch their wings and fly from perch to perch.

The cage should be furnished with perches of different thickness so the canaries can exercise their feet. You can also use fruit tree branches as perches, such as pear or apple, but do ensure they have not been soiled by wild bird droppings. Do not place perches directly above food and water pots. Put a few toys inside the cage but do not overcrowd it. Try buying a selection of toys and rotating them to avoid boredom.

Sand sheets or cage bird sand should be placed in the bottom of the cage and replaced regularly. The cage and furnishings should be thoroughly cleaned and disinfected with a pet safe disinfectant weekly, although droppings should be removed daily. A removable tray will make cleaning easier.

Outside aviaries must have a sheltered section to provide protection from wind, rain and strong sunlight. This is where you should position the roosting site (the highest perch or nest box) and the food containers. Aviaries should also have a paved floor with a sunken wire mesh to prevent vermin and a double-door entry system for added safety.

## INTRODUCING YOUR CANARIES TO THEIR NEW HOME

Always take your birds home in a carry box, not in a cage. Before introducing your canaries to their new home, fill the food and water pots and sprinkle a little extra onto the floor, to ensure they have enough to eat until they find their seed pots.

Make sure all windows and doors are closed and fires are guarded. Gently open one end of the carry box and let your canaries walk into their new home. If they appear anxious or do not settle, drape a cloth over three sides of the cage until they settle. Leave them to adjust to their new setting quietly for a few hours.

Care should be taken not to disturb your canaries at night. Night fright can cause the birds to fly into the cage wire, so cover the cage at night.

## FOOD AND WATER

In the wild, canaries feed on a variety of seeds, including seedling grasses and leaves of plants. Your pet canary will require a good mixture of seeds to ensure it is getting all the nutrients it needs - a good quality canary mixture should be available from your pet shop.
